

# Environmental Product Declaration

In accordance with ISO 14025:2006, EN 15804:2012+A2:2019/AC:2021 for

## INTELLO XN (Finland)

Hydrosafe® high-performance vapour check

from

pro clima – MOLL bauökologische Produkte GmbH

Programme:	The International EPD® System, <a href="http://www.environdec.com">www.environdec.com</a>
Programme operator:	EPD International AB Box 21060 SE-10031 Stockholm, Sweden
EPD registration number:	EPD-IES-0017289
Publication date:	06/12/2024
Valid until:	06/12/2029
EPD type:	EPD of a specific product

*An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at [www.environdec.com](http://www.environdec.com)*

## General information

### Programme information

Programme: The International EPD® System

Address: EPD International AB  
Box 210 60  
SE-100 31 Stockholm, Sweden

Website: [www.environdec.com](http://www.environdec.com)

E-mail: [info@environdec.com](mailto:info@environdec.com)

### Product Category Rules (PCR)

CEN standard EN 15804 serves as the Core Product Category Rules (PCR)

Product category rules (PCR): PCR 2019:14 Construction Products, version 1.3.4.

UN CPC code: No. 36330: Plates, sheets, film, foil and strip, of plastics, not self-adhesive, non-cellular and not reinforced, laminated, supported or similarly combined with other materials

PCR review was conducted by: The Technical Committee of the International EPD® System. See [www.environdec.com](http://www.environdec.com) for a list of members. Review chair: Claudia A. Peña, University of Concepción, Chile. The review panel may be contacted via the Secretariat [www.environdec.com/contact](http://www.environdec.com/contact)

### Life Cycle Assessment (LCA)

LCA accountability: Jannik Schulz, María Díaz Cáceres,  
brands & values GmbH, [info@brandsandvalues.com](mailto:info@brandsandvalues.com)

### Third-party verification

Independent third-party verification of the declaration and data, according to ISO 14025:2006, via:

EPD verification by individual verifier

Third party verifier: Jan Weinzettel, [weinzettel@seznam.cz](mailto:weinzettel@seznam.cz)

Approved by: The International EPD® System

Procedure for follow-up of data during EPD validity involves third-party verifier:

Yes  No

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

## Company information

### Owner of the EPD

pro clima / MOLL bauökologische Produkte GmbH  
Rheintalstr. 35-43 – 68723 Schwetzingen – Germany  
T: +49 (0) 62 02 – 27 82.0; info@proclima.com

### Contact

Michael Förster: support@proclima.com

### Description of the organisation

pro clima is a pioneer in the intelligent, reliable sealing of building envelopes. The company develops and markets product systems for achieving maximum protection against moisture damage to structures and mould:

- Humidity-variable hydrosafe® high-performance vapour check and airtightness membranes for interior sealing on new buildings and renovation projects.
- Roofing underlays and breather membranes (WRBs) with active moisture transport for permanently protected exterior sealing of roofs and walls.
- Special adhesives and waterproof tapes.
- Sealing grommets as detailed solutions.

### Highest quality for optimal performance

- The system products are manufactured using state-of-the-art production processes at leading production facilities in Germany.
- Production is subject to the highest quality standards, ensuring that insulation is reliably protected against moisture damage and mould.
- Highest effectiveness of thermal insulation.
- Reduction of heating costs due to optimal air sealing.
- Dry insulation materials.
- Best possible protection against moisture damage to structures and mould.
- Comfortable interiors in summer and winter.
- Healthy indoor climates.
- Highest ecological value.

### Together towards a successful future

People are the focus of every decision at pro clima, and the company's guiding mission is to advance building culture as a whole. To achieve this goal, system products have been developed for over 30 years that are consistently geared to meet the health and comfort needs of users. Many of pro clima's pioneering developments are now established as state-of-the-art approaches. Today, these products are successfully used in over 40 countries worldwide.

### Name and location of production site(s)

pro clima / MOLL bauökologische Produkte GmbH – Rheintalstr. 35-43 – 68723 Schwetzingen – Germany.

### Product-related or management system-related certifications

All production sites are ISO 9001 certified.

# Product information

## Product name

INTELLO XN (Finland)

## Product identification

Hydrosafe® high-performance vapour check, suitable for all fibrous insulation mats and boards

## Product description

INTELLO XN (Finland) has the following components:

Protective and covering fleece: polypropylene; functional film: polyethylene copolymer.

## UN CPC code

No. 36330: Plates, sheets, film, foil and strip, of plastics, not self-adhesive, non-cellular and not reinforced, laminated, supported or similarly combined with other materials

## Products covered by the EPD

INTELLO XN (width: 1.5 m / length: 20 m) GTIN 4026639224101

INTELLO XN (width: 3 m / length: 50 m) GTIN 4026639222909

INTELLO XN (width: 1.5 m / length: 20 m) GTIN 4026639241962

This EPD relates to a single product – INTELLO XN (Finland) – and covers multiple GTINs. While all variants are essentially the same product, they differ only in their dimensions or customised printing, such as customer logos. These variations meet specific customer requirements, but do not alter the inherent environmental characteristics of the product, thus justifying a common EPD.

## Geographical Scope

Global

## Applications

For use on roofs, walls, ceilings and floors on structures that are open or closed to diffusion on the exterior, e.g. flat/pitched roofs and green roofs, after appropriate design calculations have been carried out.

## Properties

Best possible protection against damage to structures and mould because this product is humidity-variable with a variation of a factor of over 100. In winter under European conditions, INTELLO XN becomes more impermeable to diffusion and protects the insulation against moisture penetration in an ideal manner. In summer, it can reduce its diffusion resistance very significantly and thus facilitates the best possible drying-out conditions. Permanent protection: performance tested and certified by independent testing authority. Protected winter building sites thanks to hydrosafe® behaviour. Can be combined with all fibrous insulation mats and boards. Easy to work with: dimensionally stable, no splitting or tear propagation. Excellent values in hazardous substance testing, emission category M1.

## Technical specifications

Property	Regulation	Value
Colour	N/A	White-transparent
Surface weight	EN 1849-2	100 ±10 g/m <sup>2</sup>
Thickness	EN 1849-2	0.33 mm
Water vapour resistance factor $\mu$	EN 1931	45 450
$s_d$ value	EN 1931	15 m
$s_d$ value, humidity-value	EN ISO 12572	0.25 - >25 m
Hydrosafe value ( $s_d$ )	DIN 68800-2	2 m
Fire rating	EN 13501-1	E
Tensile strength MD/CD	EN 12311-2	190 N/5 cm / 125 N/5 cm
Elongation MD/CD	EN 12310-1	70 % / 70 %
Nail tear resistance MD/CD	EN 12310-1	65 N / 70 N
Durability after artificial ageing	EN 1296 / EN 1931	Passed
Temperature resistance	N/A	Permanent -40 °C to 80 °C ; -40 °F to 176 °F
Thermal conductivity	N/A	0.04 W/(m·K)
CE labelling	EN 13984	Yes

## LCA information

The EPD conducted is for the specific product INTELLO XN (Finland) airtightness and vapour check membrane

**Declared unit:** 1 m<sup>2</sup> of INTELLO XN (Finland) airtightness and vapour check membrane and accompanying packaging.

**Conversion factor to mass:** 0.127 kg/m<sup>2</sup> (Product with packaging)

**Grammage of product:** 0.102 kg/m<sup>2</sup> (Product without packaging)

**Reference service life:** 50 years

**Time representativeness:** Based on yearly manufacturing data from 01/01/2023 until 31/12/2023.

### Description of the manufacturing processes

The INTELLO XN hydrosafe® high-performance vapour check membrane (for Finland) is produced by bonding and laminating the fleece layer and the functional film to create large rolls. These rolls are printed and then cut into smaller rolls, which are the sales units. These rolls are then packaged and sent for storage and distribution, first to the central warehouse in Germany, and then all over the world for further sale.

### Database and LCA software used

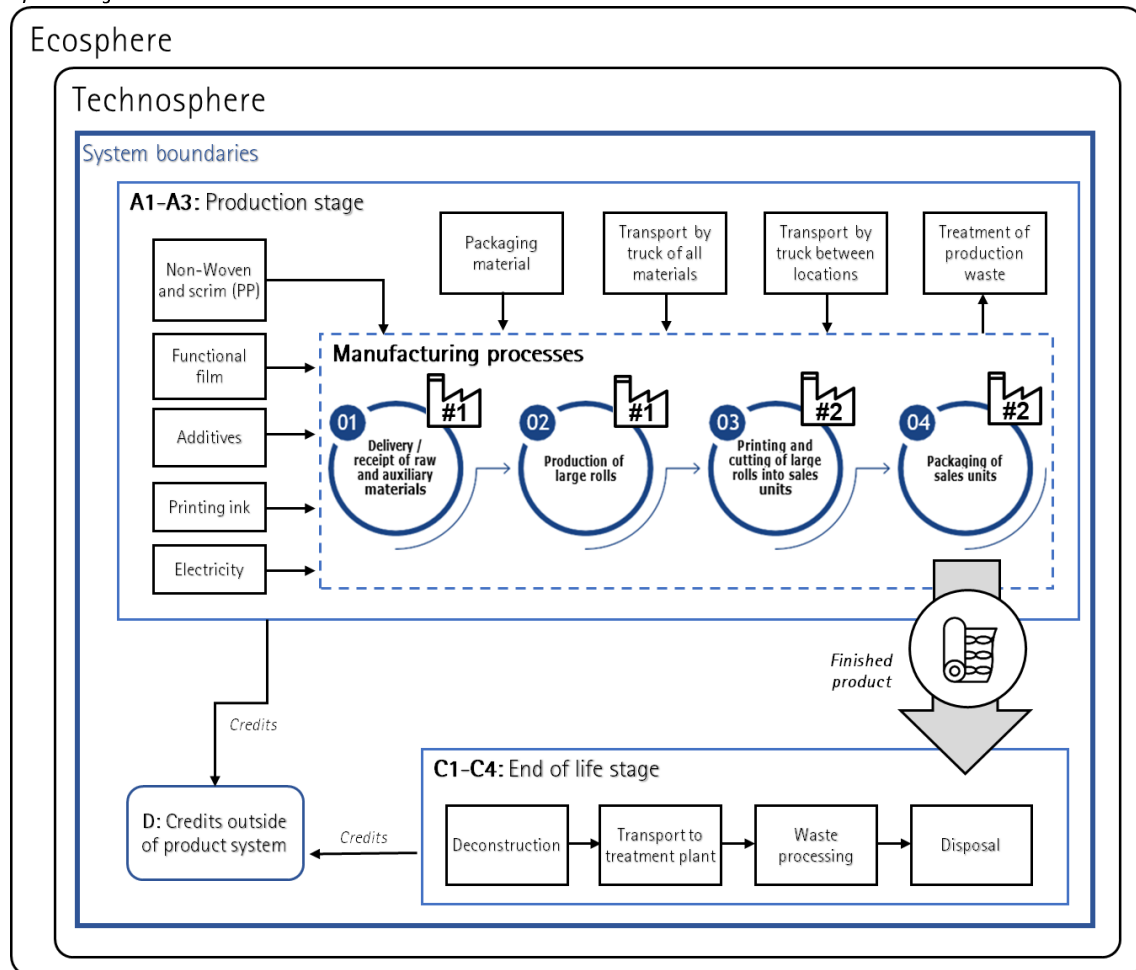

For the LCA model, the software system for holistic balancing (LCA for Experts) version 10.9 was used. Background data sets from the current version of the LCA for experts (GaBi) database service pack 2024.2 were used entirely.

### Description of system boundaries

a) Cradle to gate with modules C1–C4 and module D (A1–A3 + C + D)

- As module A5 is not declared, the results of modules A1–A3 include the biogenic C of the product packaging and the balancing out of the biogenic carbon flows from module A5.
- Infrastructure and capital goods are excluded from the system boundaries.
- All processing steps and locations are balanced within the system boundaries.
- The LCI manufacturing data was gathered for the specific declared product, and no co-product allocation was necessary.
- The allocation of waste follows the polluter-pays principle. The system boundary to the next product system is set when the waste reaches the end-of-waste state. The impacts of waste treatment from production are included in Module A3. The impacts of waste treatment during end-of-life are included in Module C, where the product reaches the end-of-waste status.
- All the LCI data in Modules A1–A3 corresponds to primary data collected from the manufacturing plant and contracted suppliers, including material and energy inputs, and waste and emission outputs.

## System diagram

Each processing step within the system boundaries is marked with an icon and number (#1, #2, etc.), indicating the specific production site where it occurs. The system boundaries cover the following modules:

### A1. Raw Material Supply

- Extraction and processing of raw materials required for manufacturing the defined airtightness and vapour check membrane: Non-woven (PP), film (HDPE), additives and printing ink.
- Extraction and processing of raw materials required for packaging the 1 m<sup>2</sup> of finished product, airtightness, and vapour check membrane: Cardboard, film (PE) and wood pallet.
- Extraction and processing of raw materials of internal packaging, used for transportation between all production locations. Internal packaging includes film (PE), cardboard and wood pallet.
- Generation of electricity from primary energy resources to supply the production sites with energy.

### A2. Transportation

- Transportation of the raw materials was modelled based on the providers specific locations and transportation via truck to the production location #1 in Germany. All materials are procured from providers within less than 800 km.
- After production, the large rolls are transported to the production location #2 for cutting of the large rolls into sales units, printing, individual packaging and labelling of the sales units. The sales units are then packed with film (PE) for transportation on pallets. The transportation of raw materials for packaging as well as the transportation of the large rolls from the production location #1 for finishing manufacturing in the production location #2 is modelled in Module A2.

### A3. Manufacturing

- Manufacturing of the defined airtightness and vapour check membrane occurs in Germany.
- The production of the large membrane roll is done in the production location #1, by bonding and laminating the polymers and the non-woven. The rolls are cut into sale units, after printing and confection in the production location #2. The products are then packed on pallets for further transportation.
- Treatment of waste generated from the manufacturing processes is included in the model. The model includes processing up to the end-of-waste status or disposal of final residues including any packaging not leaving the factory gate. Resulting credits are assigned to module D.
- Electricity for production in module A3 is modelled with the German Residual electricity mix.

**C1-C4. End of Life**

- The airtightness and vapour check membrane required for installation are treated as waste in module C3 by means of incineration with energy recovery.
- Module C2 contains the environmental impact of transportation of the product to the waste treatment plant.
- Module C3 contains the necessary processes for waste treatment at the end of the product life cycle. The loads for waste treatment are mapped here until the end of the waste property is reached.
- Emissions are assigned to module C3. Resulting credits are assigned to module D.

**D. Reuse, recovery, recycling potential**

- This product has no considerable benefits due to reuse, but considerable benefits from material and energy recovery.
- The value flows resulting from the treatment of production waste in module A3 and C3, which can potentially serve as material or energy input for a downstream product system in the form of the energy recovered from the waste-to-energy treatment and material recovery, are accounted for completely in module D as credits outside of product system.

### More information

- Additional information can be found by contacting pro clima at [info@proclima.com](mailto:info@proclima.com)
- LCA practitioner: brands & values GmbH, [info@brandsandvalues.com](mailto:info@brandsandvalues.com)

Electricity in A1-A3 accounts for less than 30% of the GWP-GHG results of modules A1-A3. The energy requirements for production were modelled using the Residual electricity mix of the electricity supplier on the market. In this case the LCA for Experts dataset of [Residual grid mix; AC, technology mix; consumption mix, to consumer; <1kV](#) in Germany from the reference year 2022. The climate impact of the dataset is 0.847 kg CO<sub>2</sub> eq./kWh (using the GWP-GHG indicator). A residual mix represents the production mix of a country corrected with generation attributes which are explicitly tracked. Residual mix is used to determine the energy origin of untracked consumption, i.e. consumption, which has not been disclosed with explicit tracking instruments such as Guarantees of Origin. The Residual grid mix in question includes the following energy sources: 1.8% from renewable sources, 18.17% from nuclear, 34.57% from lignite, 21.19% from coal, 20.88% from gas, 1.08% from oil and 2.32% from non-specific fossil sources according to the LCA for Experts dataset.

None	Not applicable	Not applicable	Not applicable

## Environmental information

The estimated impact results are only relative statements which do not indicate the end points of the impact categories, exceeding threshold values, safety margins or risks. According to the EN 15804 standard, the characterization factors of EU-JRC must be applied. The EN 15804 reference package based on EF 3.1. was used for the LCA calculations. The characterization factors are available at the following internet connection: <http://eplca.jrc.ec.europa.eu/LCDN/developerEF.xhtml>

Disclaimer: The use of the results of modules A1-A3 is discouraged without considering the results of modules C1-C4

### Potential environmental impact – mandatory indicators according to EN 15804

Results per functional or declared unit

Acronyms	GWP-fossil = Global Warming Potential fossil fuels; GWP-biogenic = Global Warming Potential biogenic; GWP-luluc = Global Warming Potential land use and land use change; ODP = Depletion potential of the stratospheric ozone layer; AP = Acidification potential, Accumulated Exceedance; EP-freshwater = Eutrophication potential, fraction of nutrients reaching freshwater end compartment; EP-marine = Eutrophication potential, fraction of nutrients reaching marine end compartment; EP-terrestrial = Eutrophication potential, Accumulated Exceedance; POCP = Formation potential of tropospheric ozone; ADP-minerals&metals = Abiotic depletion potential for non-fossil resources; ADP-fossil = Abiotic depletion for fossil resources potential; WDP = Water (user) deprivation potential, deprivation-weighted water consumption						

\* Disclaimer: The results of this environmental impact indicator shall be used with care as the uncertainties of these results are high or as there is limited experience with the indicator.

### Potential environmental impact – additional mandatory and voluntary indicators

Results per functional or declared unit							
Indicator	Unit	Tot. A1-A3	C1	C2	C3	C4	D
GWP-GHG <sup>1</sup>	kg CO <sub>2</sub> eq.	3.04E-01	0.00E+00	8.82E-04	2.83E-01	0.00E+00	-1.20E-01
PM	Disease incidence	ND	ND	ND	ND	ND	ND
IR	kBq U235 eq.	ND	ND	ND	ND	ND	ND
ETP-fw	CTUe	ND	ND	ND	ND	ND	ND
HTP-c	CTUh	ND	ND	ND	ND	ND	ND
HTP-nc	CTUh	ND	ND	ND	ND	ND	ND
SQP	dimensionless	ND	ND	ND	ND	ND	ND
Acronyms	GWP-GHG = This indicator accounts for all greenhouse gases except biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. As such, the indicator is identical to GWP-total except that the CF for biogenic CO <sub>2</sub> is set to zero; PM = Particulate matter emissions; IR = Ionizing radiation, human health; ETP-fw = Eco-toxicity - freshwater; HTP-c = Human toxicity, cancer effect; HTP-nc = Human toxicity, non-cancer effects; SQP = Land use related impacts/Soil quality						

<sup>1</sup> The indicator includes all greenhouse gases included in GWP-total but excludes biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. This indicator is thus almost equal to the GWP indicator originally defined in EN 15804:2012+A1:2013.

## Interpretation

The following dominance analysis show the individual impact categories and explore them in depth.

The environmental impacts were analysed using the example of global warming potential (GWP total) to identify the responsible sources along the life cycle. Modules A1-A3 (51.6%) has dominant influence followed by Module C3 (48.0%) on GWP total and fossil. The main source of GWP impact is the production of non-woven. The production of non-woven causes the highest environmental impact in all main categories, only surpassed in the GWP-fossil by the incineration of polypropylene (non-woven), in module C3.

Transportation of raw materials to and between the manufacturing sites (A2) and disposal transportation of the product in EoL (C2) are not very relevant in terms of GWP total.

The production of non-woven in Modules A1-A3 has the largest contribution to the impacts of all main indicators, except for GWP luluc, GWP fossil, ODP and ADPE. The truck transport in Module A2 is the main contributor for GWP luluc and the incineration of polypropylene (non-woven) for GWP fossil. The highest contributor for ODP and ADPE is the use of additives that increase the flexibility and adhesion of the product.

The data quality of the relevant generic datasets used is classified as very good, good or satisfactory. Relevant data sets are defined as data sets that together account for at least 80% of the absolute impact of each core indicator included in the EPD across the declared modules except for Module D.

The variation of the environmental impact indicator results for modules A to C between the included products is 0%.
